

Why all natural and environmentally safe is better when it comes to drain cleaners.

Nobody likes to get a clogged drain, but most importantly, nobody should use chemical drain cleaners to clean their drains. They are among the most hazardous class of consumer products available. Chemical drain cleaners often end up damaging and corroding drain pipes while polluting our water systems with toxins. The effects on our environment are astounding.

We think our future is more important than that – that’s why we developed DRAINBO, a product that works safely on your pipes and drain lines but won’t hurt the environment.

DRAINBO is an all natural, environmentally safe and non-chemical drain cleaner formulated for use in all home and commercial drains.

DRAINBO works powerfully to remove built up residues of grease, soaps and detergents in your drain system, yet it is non-toxic and biodegradable. Used for kitchens, bathrooms, RV’s, boats and any situation where drains are slow or clogged, **DRAINBO**’s easy-to-use, economical, lemon scented liquid concentrate will improve the flow of your drain lines without the hazards associated with chemical drain cleaners.

How does DRAINBO work?

DRAINBO’s all natural formula, contains seven strains of grease and protein eating bacteria, combined with a pleasant lemon scent. Applied to a slow draining or clogged system, **DRAINBO**’s biological formula works to remove build up from the drain lines almost like that computer game, gobbling up the grease and food particles, soap and other blockages to clear the flow of water.

We care about our planet and that’s why we created Drainbo products.

DRAINBO

Drainbo offers quality products that are all natural, nontoxic and 100% safe to the environment.
