

# Delicious Food and Environmental Responsibility Served Here

**DRAINBO** Drain and Trap Treatment non-chemical formula works powerfully to remove built up residues of grease, soaps and detergents in your drain system, yet it is environmentally safe, non-toxic and biodegradable.

Commercial cleaning agents including drain cleaners are among the most hazardous products available for use in your restaurant or food service facility. And using those chemical drain cleaners often ends up damaging and corroding drain pipes and polluting our water systems with toxins.

The effects on our environment are astounding.

You care about all the ingredients you use in your food – why would you use anything but natural and safe cleaning agents in your kitchen? We care too – that's why we created **DRAINBO** Drain Cleaner – all natural and environmentally safe.

**DRAINBO's** all natural formula, contains seven strains of grease and protein eating bacteria, combined with a pleasant lemon scent. Applied to a slow draining or clogged system, **DRAINBO's** biological formula works to remove build up from the drain lines almost like that computer game, gobbling up the grease and food particles, soap and other blockages to clear the flow of water.

And **DRAINBO** not only cleans as well as a traditional chemical product but it also provides “after-cleaning” effects. Billions of tiny microbial “workers” keep gobbling up residual organics and continue to work as long as organic soils and moisture remain. Regular use of **DRAINBO** helps eliminate odors and reduces the need for grease trap pumping to a minimum.

*Drainbo offers quality products that are all natural, nontoxic and 100% safe to the environment. We care about our planet and that's why we created Drainbo products.*
